DESCRIPTORS: *Meters, *Hall effect, Semiconductor
devices, Magnetic fields, Vibration.

The invention involves a method for measuring dis-
placements and electrical vibrations using Hall's
phenomenon where the movement of a semiconductor
plate in a magnetic field is caused directly by the
measured object or a mechanical system. The zero
value of Hall's potential is regulated by position of the

Trans. of Akademiya Nauk SSSR. Otdeleniye
Tekhnicheskikh Nauk. Izvestiya 1957, no. 10,
p. 3-5.

Preceding tension (torsion) has no effect on subsequent
torsion (tension). Preceding torsion (tension) does not
strengthen the material for subsequent tension
(torsion). In experiments on simultaneous torsion and
tension the strengthening effect of the preceding test
is achieved when the parameter λ in the subsequent
test changes insignificantly. Under variable loads the
proportionality between deviations in stresses and
deformations is violated. (Author)
